

Enterprise Information Sharing Environment (EISE): Enabling Information Sharing and Knowledge Discovery

Problem Statement:

- Marine Program Manager (PM) Light Armored Vehicles (LAV) requires IT methodology for networking “everything everywhere”—computers, databases, sensors, and humans

Technical Approach:

- Promotes a loosely-coupled, platform-independent approach towards linking devices, data, applications and users
- Is interoperable vice integrated
- Implemented as URL + tagging architecture

Benefit:

- Near term: improve Marine corps’ ability to locate, manage, share, and understand PM LAV data
- Long term: lay foundation for future Marine Corps information sharing innovations and collaborations
